

Initial situation

Working environments in which employees enjoy working together: By redesigning its headquarters, SEEBURGER AG aimed to create a modern working environment that allows employees to work optimally according to their individual needs.

The Project: Equipping 450 new workstations and middle zones

Workstations: 450

Customer: Seeburger AG

Specialized trade partner: feco-feederle GmbH

Location: Bretten

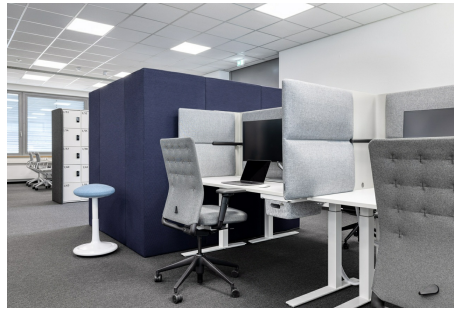

Realization: 09/2021 – 05/2022

Planungsprozess

Besondere Herangehensweise: In Kooperation mit feco-feederle GmbH und einem Projektteam, bestehend aus SEEBURGER Mitarbeitenden, wurden im Rahmen von Workshops die Bedürfnisse und Wünsche der Teams eruiert. Aus diesen Anforderungen heraus entstanden verschiedene Konzepte, die visualisiert und geplant wurden.

Die Planung beinhaltet für jede Etage des Gebäudes ein eigenes Farbkonzept, das im Sinne von sogenanntem „mood- und activity based working“ das kreative Arbeiten unterstützen soll. So kann je nach persönlichem Befinden und Aufgaben der richtige Arbeitsplatz gewählt werden.

Planning process

The planning includes a separate color concept for each floor of the building, which is intended to support creative work in terms of so-called “mood- and activity-based working”. This allows the right workstation to be chosen depending on personal mood and tasks.

Implementation

Open spaces and screening: through the use of ophelis nest modules, the 2-person and 4-person workstation combinations have an open design, yet individual screening is possible. The new partition wall system paravento XL additionally structures the different zones. ophelis docks and paravento hubs are used for the various communication and retreat zones.

Loose cabinets and my stuff for personal storage space at the desk have also created the conditions for desk sharing. Designed in this way, the premises offer flexibility in meeting the individual needs of employees and teams.

Agile areas round out the space available for employees.
